MAE 1001

Introduction to Mechanical and Aerospace Engineering

Course website: https://gwu-mae1001.github.io/fall2026/

Prof. Kartik Bulusu, MAE Dept.

Graduate Teaching Assistant:
Preethi Siva Kumar (MAE Dept., MS student)

Learning Assistants:
Anya Spevacek (Senior, MAE Dept.)
Ergi Agaj (Senior, MAE Dept.)
Toby Pike (Junior, MAE Dept.)

GW School of Engineering & Applied Science
THE GEORGE WASHINGTON UNIVERSITY

Introduction to Week 2

Announcements, overviews and more!

Blitz Talk with Claire Caltabiano

Guest Lecture with Professor Saniya LeBlanc

The Many Facets of Energy

Solidworks Crash Course 2

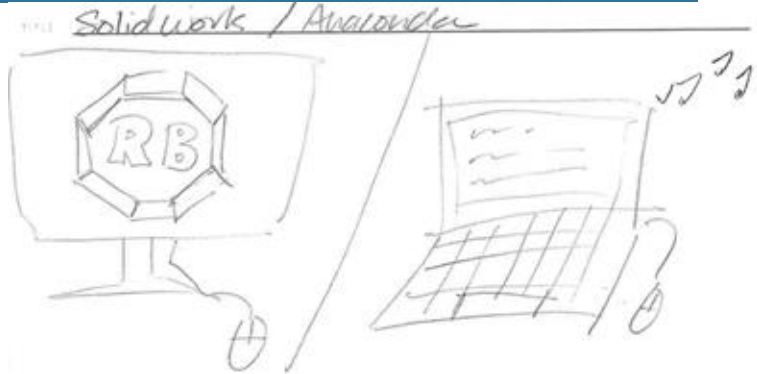

Assembly and Simulations

Bias in Dice

Buoyancy, Bias and Python

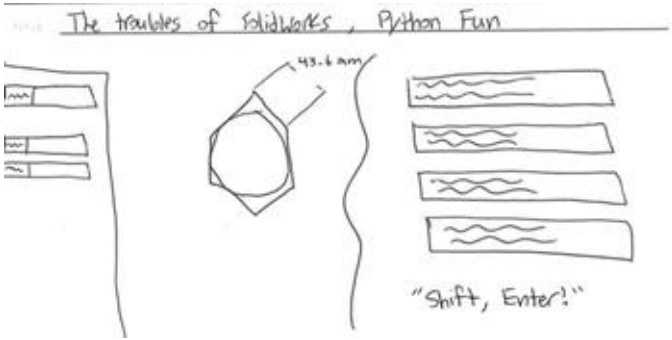

Week 2 - Best Doodles

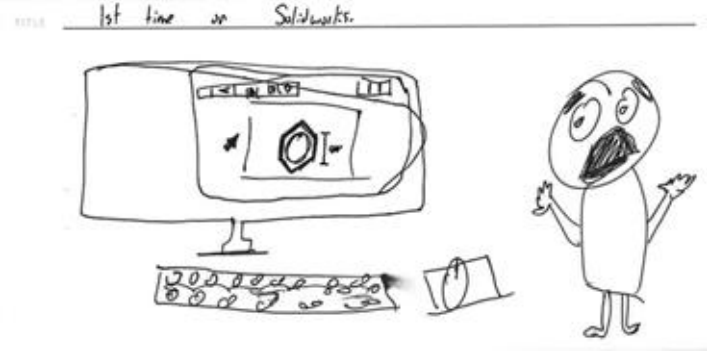

Roan Brown

Emilio Martinez Diaz De Leon

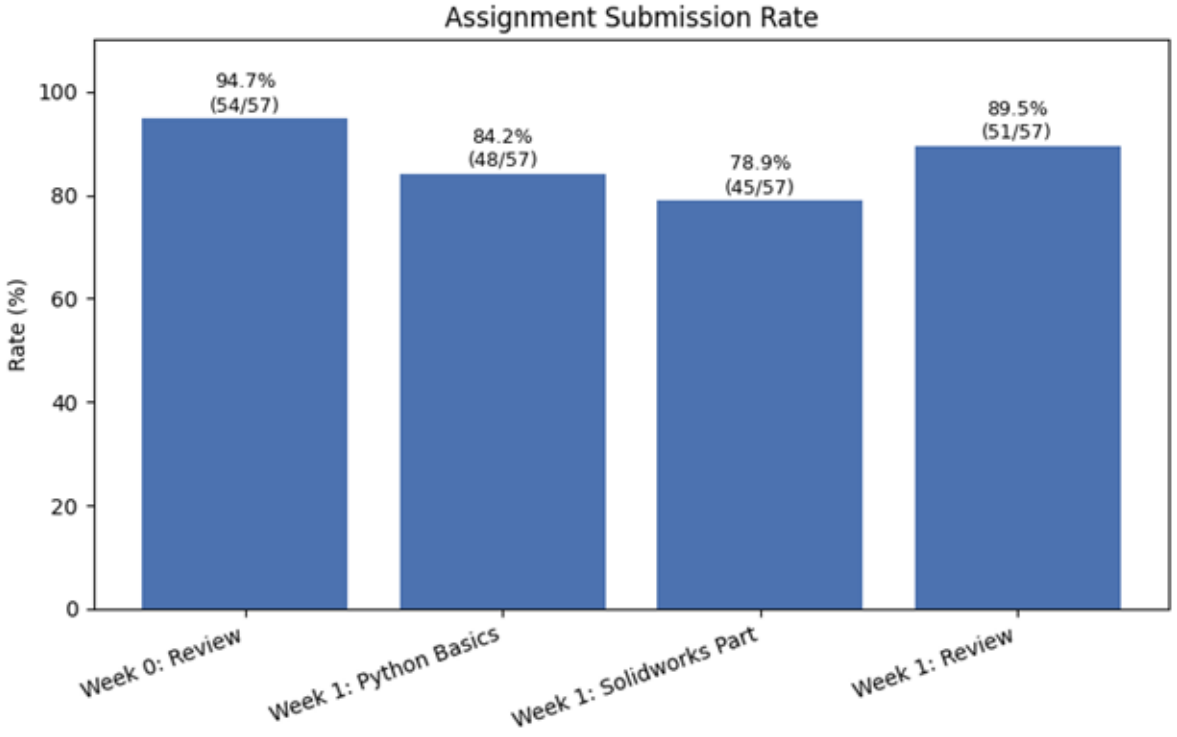

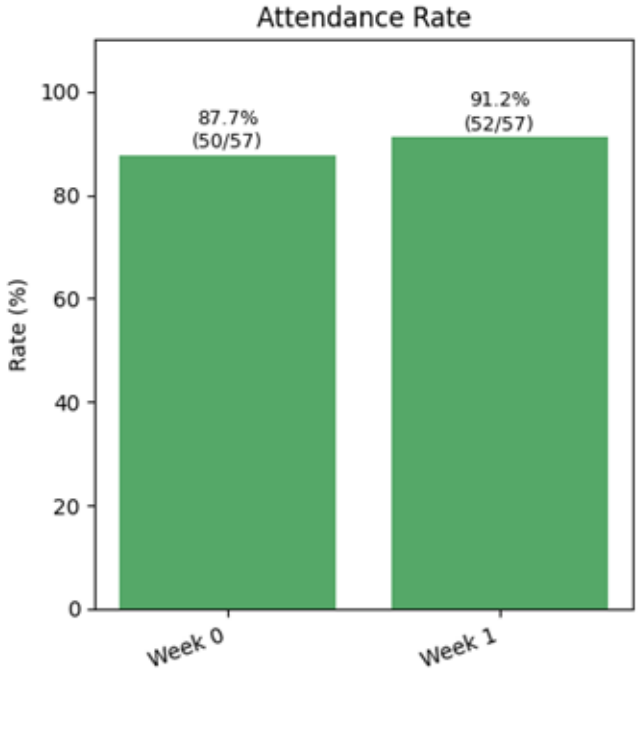

Kaine Koltoniuk

Lorenzo Cavalieri

Week 2 - Best Doodles

Guest speaker: Claire Caltabiano

Senior

I am a Mechanical Engineering student at The George Washington University, concentrating in Aerospace with a minor in Astrophysics and Astronomy. My passion for space exploration and engineering drives me to constantly seek new challenges, whether through hands-on projects, leadership roles, or research opportunities.
Currently, I contribute to the Sounding Rocket Team at GWU, where I help design and build airframes for competition rockets, dedicating over 75 hours to construction and testing. As Scribe for Theta Tau Professional Engineering Fraternity, I provide leadership and strong organizational skills to the fraternity. As a Fundraising Chair for Theta Tau, I have lead initiatives to support fraternity affairs and cultivate professional connections within the engineering community.

Guest speaker: Professor Saniya LeBlanc

Professor

Department: Mechanical and Aerospace Engineering

Email: sleblanc@gwu.edu

Professor Saniya LeBlanc's research lies at the intersection of materials science, energy conversion, and thermal transport. Her group enables nanomaterials integration by bridging the divide between rapid, inexpensive manufacturing of nanostructures and device integration of nanoengineered components. Her experimental research includes development of scalable nanomanufacturing processes such as spray coating and printing of functional nanomaterials.

Projects involve energy harvesting devices that utilize the unique combination of properties offered by nanostructured materials; recent examples include thermoelectric power generators for waste-heat recovery. Combining energy system, cost, and policy analyses, she creates feasibility assessments for the scaling of nanotechnologies for energy applications.
